

Early Life Circumstance and Adult Mental Health

We show that psychological well-being in adulthood varies with circumstance in early life. Combining a time series of real producer prices of cocoa with a nationally representative household survey in Ghana, we find that a one standard deviation rise in the cocoa price in early life decreases the likelihood of severe mental distress in adulthood by 3 percentage points (half the mean prevalence) for cohorts born in cocoa-producing regions relative to those born in other regions. Impacts on related personality traits are consistent with this result. Maternal nutrition, reinforcing childhood investments, and adult circumstance are likely operative channels of impact. [Almond et al., 2019]Adhvaryu et al. [2019]

心理健康问题占全球疾病的 13%，这些疾病主要发生在低收入地区，因此研究心理健康的根源所在显得尤为重要，大多数文献研究的是收入和客观健康之间的复杂关系，比较少的一部分文献研究的是同期的家庭居住条件变化在当期的影响，很少有文献研究其长期影响。

How does circumstance in early life affect psychological distress in adulthood?

早期环境变化如何影响成年后的心理健康？

We exploit variation in early life conditions induced by changes in the real producer price of cocoa. Cocoa is Ghana's chief agricultural export commodity, and its price is a key determinant of household incomes in the regions where it is grown.

在加纳那些种植可可的地区，个体出生时低的可可价格提高了个体成年后患严重精神压力发生率。
可可价格降低一个标准差，种植可可地区出生的孩子与没有种植可可地区出生的孩子相比患有严重精神压力的可能性提高了 3 个百分点。

- 通过数据发现，可可价格能积极预测母亲的健康和 BMI，而母亲的健康和 BMI 与孩子出生时的健康高度相关；
- 父母通过提高疫苗接种率和延长母乳喂养时间来强化孩子初始禀赋
- 以身高衡量的健康状况随可可价格的提高而明显改善，但经济状况指标（储蓄和职业类型）并没有明显提高。

还发现死亡率和生育率都会对价格作出反应, 因此要研究选择死亡了生育在多大程度上影响心理健康方面估计结果

- 在控制父母的特征 (受教育程度、职业的虚拟变量) 后影响大小没变化;
- 加入家庭固定效应, 效果更大了
- 没看懂

经济学领域内的文献很少，在医学领域有研究对长期心理健康的影响，但是 X 都是极端恶劣环境的影响（饥荒），经济学研究中最接近的时由于近亲死亡造成的母亲精神紧张的影响，发现：孩子在童年和成年时期因精神健康障碍而使用处方药的情况大幅增加；

文中列出得饥荒文献：Brown et al. (1995, 2000); Hoek et al. (1998, 1996); Huang et al. (2013); Neugebauer et al. (1999); Pol et al. (2000); Susser and Lin (1992). This evidence focuses overwhelmingly on the impacts of severe famines, particularly on the case of the Dutch Winter Famine of 1944-1945.

本文关注的心理健康和文献中的人格特征以及非认知能力比较接近。

Empirical strategy

- 直觉
- 动机
- Specification

The intuition for our identification strategy is that households in the cocoa-producing regions of Ghana experience changes in the real producer price of cocoa as income shocks, while households in regions that do not produce cocoa are unaffected by these fluctuations. Children born into households in cocoa-growing regions during periods of high cocoa prices will have more resources, owing both to the higher incomes of cocoa-producing households and to the dependence of non-agricultural activities in these regions on the cocoa sector. These resource booms could have large and lasting impacts on mental health through their effects during both gestation and infancy.

FIGURE 1: COCOA PRICES AT BIRTH AND SEVERE DISTRESS

That is, individuals born in the cocoaproducing regions of Ghana when incomes of cocoa-producers are high show low rates of severe mental distress relative to individuals born in the same year but in parts of Ghana that do not grow cocoa. When incomes in cocoa-producing regions fall, the pattern is reversed.

$$Outcome_{irt} = \alpha + \beta(CocoaPrice_t)CocoaProducer_r + x'_{irt}\gamma + \delta_r + \eta_t + \epsilon_{irt}$$
